Network #1

The Internet

Woop woop! Your answer is correct

As previously stated, the Internet is made up of many small networks all joined together. These small networks are called private networks, where networks connecting these small networks are called public networks -- or the Internet! So, to recap, a network can be one of two types:

- A private network
- A public network

Devices will use a set of labels to identify themselves on a network, which we will come onto in the task below.
